PROFILE

I am a junior Java backend software developer who has made a career change.
My original profession is economics and finance. I am interested in the technical aspects of artificial intelligence. I have always been interested in programming and how programs work. I am very passionate and ambitious. I am a team player but I also like working independently and learning new technologies. I would like to have deepened my knowledge of programming. I plan for the long term, and I am looking for a supportive team and team leader!
